

Next-Gen Hiring

InternMatch

Intelligent internship recruitment and candidate matching platform. Bridging applicants and opportunities through semantic AI.

1

Semantic Matching

Evidence-based scoring.

2

End-to-End Workflow

Application to selection.

3

Recruiter Control

Gated metrics & privacy.

POSTMORTEM OF INTERNSHIP HIRING

The Core Bottlenecks

High-Friction Entry

Cumbersome onboarding pipelines deter candidates.

Manual Screening

Human filtering cannot scale with applicant volume.

Opaque Tracking

Candidates lack real-time application visibility.

Traditional internship recruitment fails at scale due to inefficient data processing.

The Unified Ecosystem

A connected environment that resolves workflow friction for both parties.

Dual Workflows

Dedicated, optimized portals for applicants and recruiters.

Semantic Engine

Real-time resume vs. job description matching.

Holistic Journey

Complete management from screening to selection.

DashBoard

SCALABLE ARCHITECTURE & PIPELINE

Applicant Dashboard Architecture:

Record Voice message from Here

THE PROCESS

Log in → Record Message → Analyse the message → Get perfect matched internship

It gives different Class Probabilities percentage after analysing voice message

Recruiter Dashboard Architecture:

TABS FOR recruiter

Log in → See Applicants → Check Similarity Score→ Get perfect matched interns → Shortlisting

Dashboard

Applicants

Shortlists

Those formula we use to evaluate a applicant how much his / her skills intersects with the required application

$$Score = wE \cdot Sim(Er, Ej) + wS \cdot Sim(Sr, Sj) + wP \cdot Sim(Pr, Pj)$$

$$OverallMatch = 100 \times (wE \cdot SE + wS \cdot SS + wP \cdot SP)$$

87.4%

This value is calculated by weights, for different application the weights should be different which is decided by the recruiter

$M = 0.20E + 0.20S + 0.60P$: Here those are the weights we use for Example

Score Methodology Breakdown

$$wE + wS + wP = 1$$

• Similarity Formula:

$$\cos(\theta) = \|r\| \|j\| \div (r \cdot j)$$

Transcription and voice analysis help applicants present their skills and potential more effectively, while enabling recruiters to identify the most suitable candidates for their roles. A resume may not always fully capture an applicant’s potential, communication skills, or personality

The Dashboard Link: [InternMatch Recruiter and Applicant Dashboard](#)

Strict role-based segregation protects internal vector metrics and ensures candidate data privacy.

Automated Filtering

Instant, AI-driven candidate ranking.

Gated Visibility

"Recruiter Only"
metrics strictly enforced

Deep Profiles

Extracted summaries, notes, and parsed skills.

Batch Decisions

Streamlined status updates across cohorts.

The Conclusion:

Bridging Candidates and Opportunities Frictionless applicant entry. Intelligent recruiter control. A strictly evidence-based, scalable platform for the future of hiring.
